<code>prob.cell.types</code>	<i>Get and set <code>prob.cell.types</code> slot in a <code>DigitalDLSorter</code> object.</i>
------------------------------	--

Description

Get and set `prob.cell.types` slot in a `DigitalDLSorter` object.

Usage

```
prob.cell.types(object, type.data = "both")  
  
prob.cell.types(object, type.data = "both") <- value
```

Arguments

<code>object</code>	A <code>DigitalDLSorter</code> object.
<code>type.data</code>	Element of the list. Can be ‘train’, ‘test’ or ‘both’ (the last by default).
<code>value</code>	A list with two elements, train and test, each one with a <code>ProbMatrixCellTypes</code> object.

Index

```
prob.cell.types, 1  
prob.cell.types<-  
  (prob.cell.types), 1
```
