eval.stats.samples *Get and set* eval.stats.samples *slot in a* DigitalDLSorterDNN *object.*

Description

Get and set eval.stats.samples slot in a DigitalDLSorterDNN object.

Usage

```
eval.stats.samples(object, metrics = "All")

eval.stats.samples(object, metrics = "All") <- value
```

Arguments

object   A DigitalDLSorterDNN object.

value   A list with evaluation metrics used for evaluating the performance of the model over each sample from test data.
